MANAGEMENT DISCUSSION & ANALYSIS

This Management Discussion and Analysis (“MD&A”) of Elevation Gold Mining Corporation (the “Company” or “Elevation”), has been prepared by management and approved by the Board of Directors as of May 26, 2023 and contains information that management believes is relevant to an assessment and understanding of the Company’s financial position and the results of its operations and cash flows for the three months ended March 31, 2023 and 2022. This MD&A should be read in conjunction with the unaudited interim consolidated financial statements for the three months ended March 31, 2023 (“Q1 2023”) and 2022 (“Q1 2022”), which are prepared in condensed format in accordance with International Financial Reporting Standards (“IFRS”) as applicable to the preparation of the interim financial statements, including International Accounting Standard (“IAS”) 34, *Interim Reporting*. The unaudited interim consolidated financial statements should also be read in conjunction with the audited consolidated financial statements for the years ended December 31, 2022 and 2021.

Additional information, including this MD&A, the unaudited condensed interim consolidated financial statements for the three months ended March 31, 2023 and 2022, the audited consolidated financial statements for the years ended December 31, 2022 and 2021, press releases, and other corporate filings are available on the SEDAR website, www.sedar.com, and the Company’s website, www.elevationgold.com.

This MD&A contains certain non-IFRS measures. The Company believes these measures, in addition to information prepared in accordance with IFRS, provide investors with useful information to assist in their evaluation of the Company’s performance and ability to generate cash flow from its operations. While these measures are intended to provide additional information, they should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS, as they do not have any standardized meaning prescribed under IFRS, and therefore may not be comparable to other issuers. References in this MD&A to total cash costs, all-in sustaining costs (“AISC”), average realized gold price, and per ounce equivalents are all considered non-IFRS measures and for further details on these metrics, refer to the section *Non-IFRS Measures*.

This MD&A contains forward-looking statements and should be read in conjunction with the risk factors outlined in the *Risk Factors* and *Forward-Looking Statements* sections. This MD&A provides management’s analysis of historical financial and operating results and provides estimates of the Company’s future financial and operating performance based on information currently available. Actual results will vary from estimates and variances may be significant. Readers should be aware that historical results are not necessarily indicative of future performance.

All dollar amounts in this MD&A are expressed in U.S. dollars (“\$”) unless otherwise noted. References to “CAD \$” are to the Canadian dollar.

COMPANY OVERVIEW

Elevation is a publicly listed gold and silver producer, engaged in the operation, acquisition, exploration and development of mineral properties located in the United States. The Company is incorporated under the laws of British Columbia, Canada and maintains its corporate head office at Suite 1920 – 1188 West Georgia Street, Vancouver, British Columbia, Canada. Elevation’s common shares are listed on the TSX Venture Exchange (“TSXV”) in Canada under the ticker symbol ELVT and on the OTCQX in the United States under the ticker symbol EVGDF.

The Company’s principal operation is the 100% owned Moss Mine in Mohave County, Arizona. Elevation also holds the title to the Hercules exploration property, located in Lyon County, Nevada, which is a prospective gold exploration project. The Company’s management and technical team are proven professionals with extensive experience in all the aspects of mineral exploration, mine development, operations and capital markets. Key strategic priorities for the Company are to increase production, reduce costs and increase efficiency, grow the Moss Mine and Hercules reserves and to consider other projects leading to the long-term growth of the Company and shareholder value creation.

CONSOLIDATED RESULTS SUMMARY

The following are financial and operational highlights for the three months ending March 31, 2023. Additional information and comparisons to prior periods is provided throughout this MD&A.

- Elevation produced 7,889 ounces of gold and 43,709 ounces of silver during Q1 2023 from 698,351 ore tonnes processed with average grades of 0.43 g/t gold and 5.82 g/t silver. Gold ounces produced in Q1 2023 was a 26% increase from Q1 2022.
- The Company generated total revenue of \$17.0 million on 8,078 ounces of gold and 71,286 ounces of silver sold. The average realized price of gold per ounce sold ⁽¹⁾ was \$1,906. Gold ounces sold in Q1 2023 was a 24% increase from Q1 2022.
- Income from mine operations before depreciation and depletion of \$4.0 million.
- Total Cash Costs per ounce of gold sold ⁽¹⁾ of \$1,407 and all-in sustaining costs (“AISC”) per ounce of gold sold ⁽¹⁾ of \$1,842 for Q1 2023. For further details refer to the *Non-IFRS Measures* section in this MD&A.
- On March 16, 2023, the Company announced results from 12 reverse circulation holes that included intersection of a 100.6 meter thick zone with an average grade of 0.50 g/t Au and 1.93 g/t Ag, in the Reynolds Pit area.

⁽¹⁾ This is a non-IFRS measure, for further information refer to the *Non-IFRS Measures* section in this MD&A.

IMPACT AND RISKS ASSOCIATED WITH THE RUSSIAN – UKRAINE CONFLICT

During the three months ended March 31, 2023, continuing risks associated with global inflation and supply chain delivery were further heightened by the Russian – Ukraine conflict. Inflationary increases on energy, fuel, and consumables have impacted operating costs and are expected to continue to do so throughout 2023. The Company continues to implement procurement strategies to mitigate the impact and to continue to monitor these risks, including review of how to optimize consumables used in the processing of ore and reduce cyanide and other consumables, unlocking the potential of our newly built production wells to nearly eliminate the purchase of water, and installation of a new fuel management system soon to help ensure proper fuel controls and minimize waste.

OUTLOOK

The Company continues to focus on overall efficiencies and enhancements to improve production and reduce costs. During Q1 2023, the company began a layback in the East Pit area that is expected to reach higher grade East Pit ore by July, 2023. By improving quality control from mine drilling and blasting and oversight on scheduled crusher maintenance, the Company looks ahead to continually improve crusher throughput. Comments regarding Q1 performance are discussed further in the review of mining and processing operations section in this MD&A.

During Q2 2023, the Company anticipates beginning construction of the 3A-Ph2 leach pad, which, when completed, will provide enough leach pad space for ore material planned to be mined through 2025.

The Company also continues receiving assay results from near-pit reverse circulation holes as well as from the exploration program conducted at the Florence Hill area. Both recent exploration programs are discussed further in the Exploration section in this MD&A.

EXTERNAL PERFORMANCE DRIVER AND TRENDS

The price of gold is a significant factor in determining the Company’s profitability, financial performance, and cash flow from operations. The price of gold is subject to volatile price fluctuations and can be affected by numerous economic conditions including supply and demand, interest rates, and global and political issues, such as the ongoing COVID-19 pandemic and, most recently, the Ukraine-Russia conflict. Management considers the gold price outlook for 2023 and longer-term to be favourable. As of March 31, 2023, the price of gold closed at \$1,880 per ounce. The average spot

gold price for Q1 2023 was \$1,913 (the average for the three months ended March 31, 2022: \$1,801). Despite continued volatility the overall price of gold continues to trade at a historically high value; however, longer term periods of lower gold price would result in reduced profitability, financial performance, and cash flow from operations for the Company.

REVIEW OF MINING AND PROCESSING OPERATIONS

The Company operates an open pit mine and extracts precious metals with a heap leach and Merrill Crowe circuit to produce gold and silver doré. The table below presents operational highlights for the periods presented.

		Q1 2023	Q1 2022
<u>Mining</u>			
Ore mined	t	678,654	735,217
Waste mined	t	1,561,467	1,448,519
Total mined	t	2,240,121	2,183,736
Strip ratio	waste/ore	2.30	1.97
<u>Crushing</u>			
Tonnes stacked	t	698,351	717,898
Tonnes stacked per day (average)	tpd	7,759	7,977
Contained gold ounces stacked	oz	9,688	8,050
Contained silver ounces stacked	oz	129,518	69,634
Gold grade	g/t	0.43	0.35
Silver grade	g/t	5.82	3.02
<u>Processing</u>			
Merrill Crowe efficiency – gold	%	99	97
Gold ounces produced	oz	7,889	6,268
Silver ounces produced	oz	43,709	31,029
<u>Sales</u>			
Gold ounces sold	oz	8,078	6,512
Silver ounces sold ⁽¹⁾	oz	71,286	52,970

⁽¹⁾ Includes silver ounces purchased and sold to the final customer in accordance with the silver streaming agreement.

Mining

During Q1 2023, a total of 678,654 tonnes (Q1 2022: 735,217) of ore was mined at a strip ratio of 2.30 (Q1 2022: 1.97). Average grade mined increased by 23% to 0.43 grams per tonne (“g/t”) gold in Q1 2023 (2022: 0.35 g/t). The Company moved a total of 2,240,121 tonnes for Q1 2023 (Q1 2022: 2,183,736).

Mining activities in Q1 2023 occurred in East Pit and West Pit areas versus occurring strictly in West Pit during Q1 2022. The new mining contractor’s productivity improved early in the quarter although in the second half of the quarter fragmentation issues in West Pit resulted in reduced productivity. Drilling and blasting procedures have been modified and are anticipated to improve fragmentation and mining productivity during Q2 2023.

Crushing and Stacking

During Q1 2023, the average crushing rate was 7,759 tonnes per day (Q1 2022: 7,977), resulting in a total of 698,351 crushed tonnes (Q1 2023: 717,898) at an average gold grade of 0.43 g/t (Q1 2022: 0.35 g/t) and an average silver grade of 5.82 g/t (Q1 2022: 3.02 g/t).

Tons crushed for Q1 2023 were slightly lower than Q1 2022 as a result of scheduled and unscheduled maintenance and fragmentation issues in West Pit. Contained gold ounces stacked were significantly higher as compared to Q1 2022 because of mining in East Pit during the first half of the quarter where the ore grade is higher.

Processing

During Q1 2023, a total of 7,889 gold ounces and 43,709 silver ounces were produced (Q1 2022: 6,268 gold ounces and 31,029 silver ounces), a result of better gold grade and stacking rates discussed above.

The Merrill Crowe recovery process remained highly efficient, averaging 99% in Q1 2023 improving on the 97% obtained in Q1 2022. During Q1 2023, a lift was completed on Pad 3A Phase 1. Total gold ounces produced were 26% higher than Q1 2022, benefiting from higher grade East Pit ores stacked in Q4 2022 and during the first half of Q1 2023.

FINANCIAL RESULTS

The net loss for the three months ended March 31, 2023 and 2022 is comprised of the following items:

<i>(in thousands of dollars)</i>	Q1 2023		Q1 2022	
Revenue	\$	16,953	\$	13,535
Production costs		(12,037)		(11,399)
Royalties		(890)		(619)
Mine operating income before depreciation and depletion		4,026		1,517
Depreciation and depletion		(3,361)		(1,607)
Income (loss) from mine operations		665		(90)
Corporate administrative expenses		(716)		(751)
Finance costs		(2,025)		(1,539)
Gain (loss) on revaluation of derivative liabilities		(1,565)		770
Other		2		(97)
Loss for the period	\$	(3,639)	\$	(1,707)

Elevation continues to benefit from historically high gold prices. Average realized gold per ounce sold for Q1 2023 was \$1,906, compared to \$1,881 for Q1 2022. During Q1 2023, the Company sold a total of 8,078 gold ounces and 71,286 silver ounces for total revenue of \$17.0 million (an increase of 25% from Q1 2022). For Q1 2022, the Company sold 6,512 ounces of gold and 52,970 ounces of silver for total revenue of \$13.5 million.

Production costs are comprised of mining, processing, maintenance, site administration and site share-based compensation, net of inventory changes and include write-downs of inventories due to net realizable value impairments. The table below provides a breakdown of major components of the Company's production costs:

	Q1 2023		Q1 2022	
Contractors and outside services	\$	5,687	\$	7,451
Employee compensation and benefits expense		2,226		2,257
Materials and consumables		2,517		2,603
Other expenses		1,184		1,408
Share-based compensation		20		43
		11,634		13,762
Change in inventories		403		(2,363)
	\$	12,037	\$	11,399

- Contractors and outside services decreased by \$1,764 for Q1 2023 compared to Q1 2022, which was largely driven by the capitalisation of \$2,074 in stripping costs in Q1 2023. No such capitalisation occurred in Q1 2022.

- Employee compensation and benefits, materials and consumables and share-based compensation for Q1 2023 are consistent with Q1 2022.
- Other expenses decreased by \$0.2 million in Q1 2023 compared to Q1 2022, driven by small savings in equipment rental, professional fees, freight on consumables and other small value expenditures.
- The Company had an inventory charge of \$0.4 million in Q1 2023 (\$2.4 million recovery in Q1 2022). Charges (and recoveries) related to inventory will fluctuate from period to period and reflect events such as increases or drawdowns of physical inventory carried by the Company, increases or reduction of inventory costs, and net realizable value adjustments. During the three months ended March 31, 2023, the Company reversed \$1.6 million of previous net realizable value write-down from production costs to inventory. There were no amounts written down or reversed in Q1 2022. All impairments and reversal of impairments are included in changes in inventories and part of production costs.

Depletable mineral properties and most assets included in plant and equipment are depleted on a units of production basis over the life of the mine. Depletion and depreciation rates for all periods are consistent with units of contained gold ounces stacked on the heap leach and increased depreciation and depletion expense reflect the Company's current life of mine plan.

The increase in royalty expenses for Q1 2023 is directly correlated to increases in total revenue.

Corporate administrative expenses in Q1 2023 and consistent with Q1 2022.

The increase in finance costs during Q1 2023 compared to Q1 2022 are driven by an increase in debt, including a \$12.2 million revolving credit facility on which interest is charged at 12% per annum.

Gain (loss) on revaluation of derivative liabilities includes the changes to the silver stream embedded derivative, the warrant derivatives, the convertible debenture derivatives and revolving credit facility derivative. The silver stream embedded derivative is valued using a Monte Carlo simulation valuation model that uses key inputs including silver forward curve prices, long-term silver production volatility, anticipated silver production, and other metrics. The warrant, convertible debenture and revolving credit facility derivatives are calculated using a Black-Scholes option model and use key inputs such as share price, gold price and volatility. Changes to the valuation of derivatives can be material from period to period. The loss on revaluation for the quarter included a \$0.8 million loss on the warrant derivative driven by an increase in the Company's share price. The gain on revaluation for Q1 2022 included a \$0.4 million gain on the warrant derivative and a \$0.3 million gain on the convertible debenture derivative, both of which were driven by a reduction in the Company's share price.

EXPLORATION

Reverse Circulation and Greenfields Exploration Programs

In April 2023, the Company provided an update on drilling completed in the Reynolds Pit area, including AR23-662R, which intersected 225.6 meters of nearly continuous gold mineralization with an average grade of 0.56 g/T gold, with several higher grade internal zones highlighted by 12.2 meters grading at 1.30 g/T gold. Highlights included:

- AR23-662R, collared 80.5 meters northeast of AR22-656R, on a line 37.5 meters east of AR22-656R.
- AR22-656R intersected 108.2 meters grading 0.36 g/T Au and 2.94 g/T Ag.
- AR23-662R intersected 225.6 meters with an average grade of 0.56 g/T Au and 2.77 g/T Ag.
- Assay results are pending for AR23-663R, which was collared approximately 87.2 meters southeast of AR23-662R on a line 62.5 meters east of AR23.

Assay results for four RC holes drilled on two lines in the Reynolds Pit area were reported. Three of the holes were drilled to the north-northeast into the Moss vein and associated structures. All three intersected gold and silver mineralization. The fourth hole (AR23-662R) was drilled to the south-southwest into the newly identified north-

dipping structures. AR23-662R intersected 225.6 meters of nearly continuous gold and silver mineralization with an average grade of 0.56 g/T Au and 2.77 g/T Ag.

AR23-662R was drilled on an azimuth of 188 degrees with a dip of -39 degrees and a total depth of 274.3 meters. It was drilled to test a series of surface quartz vein and stockworks surface outcrops displaying a northerly dip, conjugate to and beginning approximately 120 meters south of the Moss vein system. Variable amounts of free quartz with very low pyrite content were identified and logged in the RC chips during drilling, signifying the presence of a structure hosting a low-sulfide, epithermal stockworks and vein system. Assay results have verified that AR23-662R intersected a significant gold and silver bearing system.

AR23-662R is one of three RC holes across three lines drilled over an apparent strike length of approximately 104.2 meters to test the north dipping structures. AR22-656R, which also intersected significant gold and silver mineralization, was drilled on a line approximately 37.5 meters west of AR23-662R. Results for RC hole AR22-656R highlighted by 108.2 meters grading at 0.36 g/T Au and 2.94 g/T Ag. The third hole drilled to test the north dipping structures is AR23-663R. It was drilled on a line approximately 62.5 meters east of AR23-662R. RC chips logged from AR23-663R also display variable amounts of free quartz with very little pyrite. Only approximately 1/3 of the potential strike length of the potential north dipping structures have been tested, and the untested strike length extends to both the east and west of the tested strike length.

In March 2023, the Company provided an update from its recent reverse circulation (“RC”) resource definition and expansion drilling program at Moss Mine and an update on its recent greenfields exploration core drilling program.

- Twenty-two RC holes totaling 4,906 m have been completed into three different near-mine targets (Mordor, Reynolds Pit, and ROM Pad Ramp).
- Assay results for fourteen RC holes have been received, all of which intersected significant zones of gold mineralization.
- Significant zones of gold mineralization have been intersected in the Reynolds Pit area, where previously only historic drilling existed.
- Five diamond core holes totaling 3,141 meters have been drilled on greenfields targets in the Florence Hill, Grapevine and McCullough Patents areas. Core samples have been shipped to independent laboratories with assay and geochemical results expected in Q2 2023.

The three targets of interest for this near-mine program include the area immediately west of the West pit (Mordor area), the area between the Center pit and the crusher (ROM Pad Ramp), and the Mid-West Extension (Reynolds Pit).

In the Mordor area, three holes were drilled from a single drilling platform in a north-south fan immediately west of the West pit. All three holes intersected gold mineralization, both near-surface and at depth. This drilling is intended to extend the West pit westward as mining progresses down the hillside. Highlights include:

- 7.62m grading 0.69 g/t Au, 0.46 g/t Ag, and 3.05m grading 0.38 g/t Au, 1.50 g/t Ag and 19.81m grading 0.38 g/t Au, 0.89 g/t Ag (AR22-642R)
- 7.62 m grading 0.56 g/t Au, 0.76 g/t Ag, and 6.10m grading 0.88 g/t Au, 3.38 g/t Ag, and 54.86m grading 0.38 g/t Au, 0.75 g/t Ag, including 7.62m grading 0.62 g/t Au, 1.52 g/t Ag, and including 4.57m grading 1.15 g/t Au, 1.07 g/t Ag (AR22-643R)

In the early 1990’s Reynolds Metals drilled several holes in the Reynolds Pit area. The holes were drilled vertically and only reached depths of approximately 122 meters. Most of these holes intersected low-grade gold mineralization associated with hanging-wall stockworks veining. Elevation’s Mine Plan of Operation that was approved in March 2020 includes a permitted mine pit and stockpile in this area. This discovery could extend Elevation’s active mining area more than 500 meters to the west.

At the Reynolds Pit area, Elevation’s program consisted of seventeen inclined holes (up to -45 degrees), drilled both to the north and the south, perpendicular to the structures hosting gold mineralization. This drilling has been quite

successful with most holes intersecting thick zones of gold mineralization associated with the south dipping Moss vein structure and hanging wall stockworks. A previously untested north dipping vein and stockworks structure approximately 150 meters south of the Moss vein structure was also tested. New drilling results indicate this structure could host vein and stockworks zones up to 80 meters thick (true width) with gold grades as high as 0.92 g/t over 10.67 meters (AR22-656R). Assay results for eleven of the seventeen holes have been received. Highlights include:

- 92.96m grading 0.46 g/t Au, 1.76 g/t Ag, including 16.76m grading 1.32 g/t Au, 3.68 g/t Ag (AR22-648R)
- 100.58m grading 0.50 g/t Au, 1.93 g/t Ag, including 4.57m grading 2.23 g/t Au, 5.73 g/t Ag, and including 6.10m grading 1.09 g/t Au, 2.85 g/t Ag (AR22-654R)
- 108.20m grading 0.36 g/t Au, 2.94 g/t Ag, including 10.67m grading 0.92 g/t Au, 4.01 g/t Ag, and including 6.10m grading 0.82 g/t Au, 9.73 g/t Ag, and including 3.05m grading 0.92 g/t Au, 10.10 g/t Ag (AR22-656R)

At the area between the Center pit and the crusher (ROM Pad Ramp), two RC holes have been completed. These holes are designed to test the shallow area between the areas and were drilled to depth to the deeper extents of the Ruth and Moss veins in this area. Samples have been shipped to an independent laboratory for testing, and assay results are expected in Q2 2023.

Update on Greenfields Core Drilling Program

Five diamond core holes have been completed at the Florence Hill and Grapevine exploration areas for approximately 3,141 meters. These holes tested a broad structural zone at Florence Hill and an intensely hydrothermally altered area at Grapevine, as well as several epithermal quartz-calcite vein systems including the Hardy vein and the potential extension of the West Oatman vein/Gold Road vein structure. All drill core has been logged and sampled in detail and samples have been shipped to several independent laboratories for assay analysis and multi-element geochemistry. Longer than expected turn-around times at the laboratories have delayed assay and geochemical results until Q2 2023.

LIQUIDITY, CAPITAL RESOURCES AND GOING CONCERN

As of March 31, 2023, the Company had cash and cash equivalents of \$2.5 million (December 31, 2022: \$3.3 million). The decrease in cash compared to the year ended December 31, 2022, was primarily due to a cash outflow from operating activities of \$4.8 million, offset by the Company completing an amendment to a revolving credit facility which allowed the Company to draw down an additional \$6.0 million in principal. Under the terms of the amendment, the total maximum principal amount that may be outstanding at any given time is \$12,000, interest will be paid on a quarterly basis and is payable by delivery of physical gold. The total of gold ounces deliverable is calculated by dividing total interest payable by \$1,850 per ounce. The term of the loan was also extended to February 28, 2025.

During the three months ended March 31, 2023, working capital increased by \$9.3 million to \$14.9 million. The increase in working capital was primarily due to the extension of the maturity date of the revolving credit facility to February 2025 and a \$4.2 million decrease in trade and other payables. Working capital, excluding derivatives which are non-cash liabilities, is \$20.4 million.

The Company is in compliance with externally imposed debt covenants relating to its debt facilities and lease obligations as of March 31, 2023.

Going Concern

The Company is subject to many risks common to other companies in the same business, including under-capitalization and resource limitations. The Company may require additional capital to continue the operations of the Moss Mine or to continue as a going concern. There can be no assurance that such capital will be available or, if available, will be on reasonable terms.

As at March 31, 2023, the Company had working capital of \$14.9 million (2022: \$5.6 million) and in the three months ended March 31, 2023, the Company incurred a loss of \$3.6 million (2022: \$1.7 million), which included a non-cash

loss on derivative liabilities of \$1.6 million (as discussed in the section *Financial Results* in this MD&A). The Company used cash in operations of \$2.7 million (2022: \$0.7 million), used cash for investing activities of \$3.7 million (2022: \$2.5 million), and added \$5.5 million in cash from financing activities (2022: \$16.8 million).

The ongoing operations and capital expenditures of the Moss Mine are dependent on the Company’s ability to generate sufficient cash flow from production, which is subject to commodity price risk from fluctuations in the market prices for gold and silver. In the three months ended March 31, 2023, the Company had income from mine operations of \$0.7 million, which was net of \$3.4 million of depreciation. To continue operations at the Moss Mine, the Company will require additional financing. While the Company has been successful at raising funds in the past, there can be no assurance that it will be able to do so in the future.

See Note 1 of the Company’s condensed interim consolidated financial statements for the three months ended March 31, 2023 for further information.

Cash Flows

Cash used in operating activities during Q1 2023 was \$2.7 million (2022: \$0.7 million). The reduction compared to the comparative period is largely due to the Company’s efforts to pay-down trade and other payables which were reduced by \$4.2 million during the quarter.

Cash provided by financing activities during Q1 2023 was \$5.5 million (2022: \$16.8 million), which consisted of proceeds from a revolving credit facility of \$6.0 million, offset by debt and lease repayments totalling \$0.5 million.

Cash used in investing activities during Q1 2023 was \$3.7 million (2022: \$2.5 million), which included capital expenditures largely tied to construction and materials to be used for the new heap leach pad and exploration drilling.

Use of Proceeds

2022 Equity Financing

In March 2022, the Company completed a public offering. The funds received have been utilized in capital projects and exploration at the Moss Mine, including the building and completion of the heap leach pad 2C, monitoring and production well construction, and exploratory drilling, as well as for general and administrative purposes.

At the time of the offering, the intended use of the net proceeds were estimated to be as follows (in CAD \$ and converted to U.S. dollars at a rate of CAD \$1.00 to USD \$0.7772, the exchange rate on March 8, 2022, being the date of the offering document):

<i>(in thousands of dollars)</i>	Approximate Amount (CAD \$)	Approximate Amount (USD \$)
Heap Leach Pad Construction	\$ 3,920	\$ 3,047
Monitoring and Water Well Construction	3,120	2,425
Exploration Program	4,870	3,785
Miscellaneous Capital Expenditures	477	371
Engineering Studies for Future Heap Leaching	956	743
General and Administrative Expenses and Working Capital	5,059	3,932
Total	\$ 18,402	\$ 14,303

In March 2022, as a result of the over-allotment option being exercised by the broker agents, the Company received net cash proceeds of \$17.1 million (net of financing broker fees paid in cash and regulatory, legal, and accounting fees incurred related to the financing). A summary of the current expenditures and funds allocated to the above noted projects and their progress follows:

- The purchase of supplies and construction required for a new heap leach pad was completed in August 2022. Total funds allocated to the project to December 31, 2022 was approximately \$2.4 million. This project is now considered complete and milestones reached.
- The monitoring wells were completed in Q2 2022 at a cost of approximately \$0.4 million, while the costs associated with the production wells were approximately \$1.5 million. The production wells were completed and brought online in Q3 2022. The monitoring well project consisted of drilling and completing five points of compliance monitoring wells, which are a requirement of an Aquifer Protection Permit and subject to review and approval of multiple regulatory agencies. Current production wells at the Moss Mine Project were scheduled to be mined out in the proposed 2022 mine expansion. It is anticipated that the new production wells will reduce the amount of water to be delivered from offsite sources and support future operations and exploration work. This project is now considered complete and milestones reached.
- Exploration work at Moss Mine included expenditures of approximately \$3.0 million in RC drilling programs and geophysical surveys over the course of Q2 2022 and Q3 2022 (see details under the *Exploration* section in this MD&A). The exploration program was extended to test high-priority regional targets, including Florence Hill in August 2022. Elevation was able to accomplish its intended milestones with the funds from the equity financing. Exploration work continues and will be based on additional available funds and operating cashflows.
- The Company has also completed \$0.3 million in miscellaneous capital expenditures and \$0.2 million in pad design and technical studies. These projects are considered on-going and funded by on-going operations as required.
- In April 2022, the Company repaid approximately \$2.2 million in interest and principal related to a short-term loan which carried a fixed annual interest rate of 18% per annum. The Company was able to renegotiate the repayment of the remaining loan and reduce the interest rate on repayment to 12% per annum. The Company considered the repayment of this loan advantageous considering the high interest rate component. This short-term loan has now been repaid in full as at December 31, 2022.
- The Company utilized \$7.1 million in general working capital and funding operations since the time of the financing.

There are no remaining balances from the financing yet to be utilized in capital projects or operational activities.

SUBSEQUENT EVENTS

- The Company amended the terms of the Revolving Credit Facility. Under the terms of the amendment, the maximum principal amount available to the Company was increased to \$17.7 million, interest accrues on any unpaid principal at a rate of 10% per annum (previously 12%) and is payable quarterly in physical gold. The total of gold ounces deliverable is calculated by dividing total interest payable by \$1,850 per ounce. Partial repayments of principal, of varying amounts, are required quarterly, beginning in December 2023 until paid off in its entirety in February 2025. The Company may, at its option, at any time and from time to time, prepay without penalty or premium the Revolving Credit Facility, in whole or in part. In conjunction with the amendment of the Revolving Credit Facility, the Company has completed all deliveries required by the Gold Steam Facility and that facility is now closed. Additionally, the Company modified the Silver Stream Agreement by eliminating the step-down that was to occur following the delivery of 3.5 million silver ounces. As of March 31, 2023, the Company has delivered 1,217,142 ounces into the agreement.

SUMMARY OF QUARTERLY RESULTS

(in thousands of dollars, except per share amounts)	Three Months Ended							
	Mar. 31, 2023	Dec. 31, 2022	Sep. 30, 2022	Jun. 30, 2022	Mar. 31, 2022	Dec. 31, 2021	Sept. 30, 2021	Jun. 30, 2021
Revenue	\$ 16,953	\$ 17,108	\$ 16,979	\$ 14,386	\$ 13,535	\$ 13,759	\$ 12,095	\$ 16,590
Cost of sales	(16,288)	(19,062)	(16,684)	(20,711)	(13,624)	(17,834)	(10,898)	(13,848)
Operating income (loss) from mine operations before depreciation and depletion	4,026	2,689	2,132	(3,923)	1,517	(1,497)	2,910	5,028
Income (loss) for the period	(3,639)	(9,290)	1,193	(33,804)	(1,707)	874	3,535	741
Basic Income (loss) per share	\$ (0.03)	\$ (0.08)	\$ 0.01	\$ (0.31)	\$ (0.03)	\$ 0.01	\$ 0.06	\$ 0.01
Gold ounces produced (oz)	7,889	9,183	8,835	6,809	6,268	6,739	6,526	7,054
Gold ounces sold (oz)	8,078	9,060	9,096	6,998	6,512	6,795	6,214	8,045
Average realized gold price per ounce ⁽¹⁾	\$ 1,906	\$ 1,732	\$ 1,713	\$ 1,864	\$ 1,881	\$ 1,804	\$ 1,785	\$ 1,793
Total Cash Costs per ounce sold ⁽¹⁾	\$ 1,407	\$ 1,604	\$ 1,770	\$ 1,661	\$ 1,648	\$ 1,300	\$ 1,316	\$ 1,168

⁽¹⁾ This is a non-IFRS measure, for further information refer to the *Non-IFRS Measures* section in this MD&A.

The financial results are most directly impacted by the level of gold production/gold sales and the gold price for each quarter, which are the main drivers of the volatility noted for revenue and operating income from mine operations before depreciation and depletion in the above quarterly information table. Income (loss) for the period can be volatile from quarter to quarter due to the change in the Company's share price and global silver market pricing which will affect the fair value of the Company's derivative instruments related to warrants, convertible debentures, and the silver stream obligation.

Since the beginning of 2021, overall grade has been decreasing as the mine entered a phase of lower grade ore processing, which has been the contributing factor in the reduced gold production and ounces sold, while gold prices continue to remain strong across all periods when compared to historical values. As the Company anticipates seeing higher-grade ore being available as the Moss Mine development continues to progress into the East Pit in late 2022 and into 2023.

For the three months ended December 31, 2021, cost of sales, operating income from mine operations, and net income were impacted by a write-down of \$5.8 million related to a revised estimate of recoverable silver ounces in its heap leach ore inventory. The impact of this was offset on income for the period by a gain on the revaluation of the derivative liabilities totalling \$7.9 million.

For the three months ended June 30, 2022, cost of sales was negatively impacted by a \$6.0 million write down of heap leach and doré inventory and a non-cash impairment of \$33.9 million on the Moss Mine cash generating unit, both discussed in the *Financial Results* section of this MD&A.

For the three months ended September 30, 2022, revenue increased compared to the three months ended June 30, 2022 due to additional sales of 2,098 gold ounces. Cost of sales was positively impacted by a reversal of a previous write down of heap leach and doré inventory of \$3.0 million.

For the three months ended December 31, 2022, revenue increased compared to the three months ended September 30, 2022 due to an increase in gold price. Cost of sales was positively impacted by a reversal of a previous write down of heap leach and doré inventory of \$1.5 million, offset by a change in depreciation base which resulted in an additional \$2.5 million in depreciation for the quarter.

For the three months ended March 31, 2023, revenue decreased compared to the three months ended December 31, 2022 due to a reduction in grade from 0.53 g/t to 0.43 g/t, resulting in 982 fewer gold ounces sold. Cost of sales was positively impacted by a reversal of a previous write down of heap leach and doré inventory of \$1.6 million and

capitalization of stripping costs of \$2.1 million, offset by a change in depreciation base in Q4 2022 which resulted in additional depreciation for that quarter.

The increasing Total Cash Costs per ounce sold is a measure of the weighted average costs (adjusted to reflect net realizable charges or reversals). The Company continues to focus on improving the Company’s grade control by focusing on in-fill drilling in order to reduce per ounce costs as production grows. Most recently, the Company has noted a reduction in direct cash costs per ounce added to the heap leach pad. The Company’s focus will continue to be on higher grade ounce mining, (when compared to 2022), while continually looking to reduce costs in the mining process, for example, the addition of the new production wells, which will supply operational water for our processes and eliminate purchasing water from third party sources.

CONTRACTUAL OBLIGATIONS

At March 31, 2023, the Company had the following contractual obligations outstanding:

	Within 1 year	2–3 years	4-5 years	5+ years	Total
Debt ⁽¹⁾	\$ 1,957	\$ 18,095	\$ 417	\$ 1,427	\$ 21,896
Trade and other payables	6,097	-	-	-	6,097
Lease commitments	371	346	-	-	717
Silver stream	1,870	2,985	720	-	5,575
Gold stream deferred revenue	1,000	-	-	-	1,000
Provision for reclamation	-	-	-	11,224	11,224
	\$ 11,295	\$ 21,426	\$ 1,137	\$ 12,651	\$ 46,509

⁽¹⁾ Includes interest due on convertible debenture and debt.

OFF-BALANCE SHEET ARRANGEMENTS

At the date of this MD&A, there were no off-balance sheet arrangements that have, or are reasonably likely to have, a current or future effect on the financial performance or financial condition of the Company.

RELATED PARTY TRANSACTIONS

Related party transactions were incurred in the normal course of business and initially measured at their fair value, which is the amount of consideration established and agreed to by the parties. Amounts due to or from related parties are non-interest bearing, unsecured and due on demand.

Key Management and Board of Directors Compensation

Key management personnel are those persons having authority and responsibility for planning, directing, and controlling the activities of the Company, either directly or indirectly. The Company has identified its members of the Board of Directors and executive officers including its Chief Executive Officer and Chief Financial Officer. The remuneration of the Company’s key management personnel is as follows:

<i>(in thousands of US dollars)</i>	Q1 2023	Q1 2022
Salaries and short-term benefits	\$ 279	\$ 210
Share-based payments	\$ 15	\$ 69

Included in salaries and short-term benefits for the three months ended March 31, 2023 was \$0.1 million of termination payments made to the former Chief Financial Officer of the Company.

Other Related Party Transactions

The Company’s silver stream agreement and gold prepayment facility are held by Maverix Metals Inc., a company with a director in common with Elevation Gold Mining Corporation. Details of both agreements are disclosed in Notes 7 and 9 of the condensed interim consolidated financial statements for the three months ended March 31, 2023 and 2022.

PROPOSED TRANSACTIONS

As of the date of this MD&A, there were no proposed asset or business acquisitions or dispositions.

ADOPTION OF NEW ACCOUNTING STANDARDS

No new accounting standards have been adopted during the three months ended March 31, 2023.

FUTURE ACCOUNTING POLICY CHANGES ISSUED BUT NOT YET IN EFFECT

There were no future accounting policy changes or pronouncements issued but not yet in effect that may have a significant impact to the Company operations as at March 31, 2023.

OUTSTANDING SHARE DATA

The total number of outstanding common shares, stock options, and warrants is as follows:

As of:	May 26, 2023	March 31, 2023	December 31, 2022
Common shares	110,572,948	110,572,948	110,391,281
Stock options	5,527,769	5,727,769	5,856,826
Restricted Share Units	-	-	15,139
Warrants	51,827,524	51,827,524	58,436,736

At the Company’s Annual and Special Meeting on August 18, 2022, the shareholders of the Company elected to adopt a new 10% rolling security based compensation plan (“Equity Incentive Plan”) to replace the previous Option Plan and Share Unit Plan, which allows for the issuance of incentive stock options, deferred share units, performance share units, restricted share units, stock appreciation rights, and share purchase rights (“Awards”). Pursuant to the Equity Incentive Plan, a maximum of 10% of the issued shares of the Company, from time to time, may be reserved for issuance pursuant to the exercise of all Awards granted thereunder. Terms of any granting of Awards will be determined by the Board, subject to the provisions of the Equity Incentive Plan and the policies of the TSX Venture Exchange. No individual may be granted Awards exceeding 5% of the Company’s common shares outstanding in any twelve-month period. Full details of the Equity Incentive Plan is available on the Company’s Management Information Circular filed on July 21, 2022 available on www.sedar.com.

FAIR VALUE MEASUREMENTS AND FINANCIAL RISK MANAGEMENT

The carrying values of cash, trade and other receivables, and trade and other payables approximate their fair values due to the short-term nature of these instruments. In evaluating fair value information, considerable judgment is required to interpret the market data used to develop the estimates. The use of different market assumptions and different valuation techniques may have a material effect on the estimated fair value amounts. Accordingly, the estimates of fair value presented herein may not be indicative of the amounts that could be realized in a current market exchange. The carrying value amount of the Company’s financial instruments that are measured at amortized cost (including debt, lease obligation, and silver stream obligation) approximates fair value as they are measured using level 2 assumptions and using inputs other than quoted prices that are observable for the asset or liability either directly or

indirectly. Similarly, the carrying value of the Company's derivative instruments, which are recognized at fair value through profit or loss approximates the fair value based on the various valuation techniques associated with those instruments.

Financial Risk Management

The Company's risk management policies are established to identify and analyse the risks faced by the Company, to set appropriate risk limits and controls and to monitor risks and adherence to market conditions and the Company's activities. The Company has exposure to credit risk, liquidity risk and market risk because of its use of financial instruments.

This note presents information about the Company's exposure to each of the above risks and the Company's objectives, policies, and processes for measuring and managing these risks. Further quantitative disclosures are included throughout the consolidated financial statements. The Board of Directors has overall responsibility for the establishment and oversight of the Company's risk management framework. The Board of Directors has implemented and monitors compliance with risk management policies.

Credit Risk

Credit risk is the risk of financial loss to the Company if a client or counterparty to a financial instrument fails to meet its contractual obligations. The Company has credit risk in respect of its cash, trade and other receivables, and restricted cash. The Company considers the risk of loss relating to cash and restricted cash to be low because these instruments are held only with a Canadian Schedule 1 financial institution, a US-chartered commercial bank, and a US government agency. Trade and other receivables as of March 31, 2023 related primarily to sale of gold and silver dore bars sold but for which the funds were not collected prior to the period end. All amounts in trade and other receivables are expected to be collectible in full due to the nature of the counterparties and previous history of collectability.

Liquidity Risk

Liquidity risk is the risk that the Company will incur difficulties meeting its financial obligations as they are due. The Company's approach to managing liquidity is to ensure, as far as possible, that it will have sufficient liquidity to meet its liabilities when due, under both normal and stressed conditions without incurring unacceptable losses or risking harm to the Company's reputation.

The Company manages its liquidity risk through the preparation of budgets and forecasts, which are regularly monitored and updated as management considers necessary and through the Company's capital management activities. A summary of contractual maturities of financial liabilities is included in the section *Contractual Commitments*.

Market Risk

Market risk consists of currency risk, commodity price risk and interest rate risk. The objective of market risk management is to manage and control market risk exposures within acceptable limits while maximizing returns.

Currency risk

Foreign currency exchange rate risk is the risk that the fair values or future cash flows of the Company's financial instruments will fluctuate because of changes in foreign exchange rates. Some of the Company's operating and corporate administration expenditures are incurred in Canadian dollars and the fluctuation of the CAD \$ in relation to US dollar will have an impact on the Company's profitability and the Company's financial assets and liabilities. The Company has assessed the impact to be low. At March 31, 2023, the Company held cash denominated in US dollars ("USD") of \$2.4 million and CAD \$0.1 million (December 31, 2022: USD \$3.3 million and CAD \$0.1 million). With other variables unchanged, a 1% increase on the USD/CAD exchange rate would increase debt by less than

\$0.1 million. The Company has not entered into any formal arrangements to hedge currency risk but does maintain cash balances within each currency.

Commodity price risk

The Company is subject to commodity price risk from fluctuations in the market prices for gold and silver. Commodity price risks are affected by many factors that are outside the Company's control including global or regional consumption patterns, the supply of and demand for metals, speculative activities, the availability and costs of metal substitutes, inflation, and political and economic conditions. The value of the silver stream embedded derivative will fluctuate with changes in the price of silver which will affect future earnings. Management closely monitors trends in commodity prices of gold and other precious and base metals as part of its routine activities, as these trends could significantly impact future cash flows.

Interest rate risk

Interest rate risk is the risk that the fair values or future cash flows of the Company's financial instruments will fluctuate because of changes in market interest rates. Interest rate risk arises from the interest rate impact on cash, which is held at variable market rates, and is exposed to interest rate risk on its outstanding borrowings. With other variables unchanged, a 1% increase on the Company's floating rate debt would increase annual interest expense by less than \$0.1 million. The Company closely monitors its exposure to interest rate risk and has not entered into any derivative contracts to manage this risk.

NON-IFRS PERFORMANCE MEASURES

The Company has included certain non-IFRS measures in this MD&A. The Company believes that these measures, in addition to measures prepared in accordance with IFRS, provide investors an improved ability to evaluate the underlying performance of the Company and to compare it to information reported by other companies. The non-IFRS measures are intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. These measures do not have any standardized meaning prescribed under IFRS, and therefore may not be comparable to other issuers.

Total Cash Costs and Total Cash Costs per Ounce of Gold Sold

Total cash costs is a common financial performance measure in the gold mining industry but has no standard meaning. The Company reports total cash costs on a gold ounce sold basis. The Company believes that, in addition to measures prepared in accordance with IFRS, such as revenue, certain investors can use this information to evaluate the Company's performance and ability to generate operating earnings and cash flow from its mining operations. Management uses this metric as an important tool to monitor the Moss mine's operating cost and performance. Total cash costs include cost of sales such as mining, processing, maintenance, site administration, royalties, selling costs and changes in inventories as well as site-based share compensation less non-cash depreciation and depletion and silver revenue divided by gold ounces sold to arrive at total cash costs per ounce of gold sold. Other companies may calculate this measure differently.

Total AISC and AISC per Ounce of Gold Sold

The Company believes that AISC more fully defines the total costs associated with the operation of the Moss mine and producing gold. The Company calculates AISC as the sum of total cash costs (as described above), sustaining capital expenditures, accretion on decommissioning and restoration provision, treatment and refinery charges netted against revenue and corporate administrative expenses, all divided by gold ounces sold to arrive at a per ounce amount. Other companies may calculate this measure differently because of differences in underlying principles and policies applied. Differences may also arise due to a different definition of sustaining versus non-sustaining capital.

The following table reconciles these non-IFRS measures to the most directly comparable IFRS measure disclosed in the financial statements.

<i>(in thousands of dollars, except per ounce figures)</i>	Q1 2023	Q1 2022
Gold ounces sold	8,078	6,512
Cost of sales	\$ 16,288	\$ 13,625
Less: Depreciation and depletion	(3,361)	(1,607)
Add: Refining and transportation	69	49
Less: Silver and other bi-product revenue	(1,628)	(1,335)
Total Cash Costs	11,368	10,732
Sustaining capital expenditures	491	3,037
Capitalized stripping	2,074	-
Accretion	232	119
Corporate administration	716	751
Total AISC	\$ 14,881	\$ 14,639
Cash Costs per ounce of gold sold	\$ 1,407	\$ 1,648
AISC per ounce of gold sold	\$ 1,842	\$ 2,248

The Company has calculated Total Cash Costs, Total AISC, and relevant per ounce of gold unit rates consistently across each of the periods presented, which includes period adjustments for heap leach and doré impairment reversals incurred in Q1 2023. These impairment reversals (described immediately above) can create fluctuations where such adjustments occur. The decrease in AISC per ounce compared to Q1 2022 is driven by a sharp decline in sustaining capital expenditures. Sustaining capital expenditures for Q1 2022 included \$1.7 million in design and construction costs related to new heap leach pads and \$1.2 in near-mine exploration drilling. Sustaining capital expenditures for Q1 2023 consist entirely of near-mine exploration drilling. The Company expects sustaining capital expenditures to increase over 2023 as construction ramps up on new heap leach pads.

Average Realized Price of Gold and Average Cash Margin Per Ounce Sold

Average realized price and average realized cash margin per ounce sold are used by management and investors to better understand the gold price and cash margin throughout a period.

Average realized price is calculated as revenue per the Consolidated Statements of Loss and Comprehensive Loss of the Company's for each of the periods presented with adjustments as noted below, less silver revenue divided by gold ounces sold. Average realized cash margin represents the average realized price per gold ounce sold less total cash costs per ounce sold.

<i>(in thousands of dollars, except per ounce figures)</i>	Q1 2023	Q1 2022
Gold revenue	\$ 15,394	\$ 12,249
Gold ounces sold	8,078	6,512
Average realized price per ounce sold	\$ 1,906	\$ 1,881
Less: cash cost per ounce sold	(1,407)	(1,648)
Average realized margin per gold ounce sold	\$ 499	\$ 233

RISKS AND UNCERTAINTIES

The Company is subject to various business, financial, operational, and other risks, uncertainties, contingencies and other factors which could materially adversely affect the Company's future business, operations, and financial

condition and could cause such future business, operations and financial condition to differ materially from the forward-looking statements and information contained in this MD&A.

The nature of the Company's activities and the locations in which it operates mean that the Company's business generally is exposed to significant risk factors, known and unknown, many of which are beyond its control.

For a comprehensive discussion of risks faced by the Company, which may cause the actual financial results, performance or achievements of the Company to be materially different from the Company's estimated future results, performance or achievements expressed or implied by forward-looking information or forward-looking statements, please refer to the Company's latest Annual Information Form ("AIF"), filed on www.sedar.com.

INTERNAL CONTROLS OVER FINANCIAL REPORTING

In compliance with the Canadian Securities Administrators' Regulation, the Company has filed certificates signed by the Chief Executive Officer ("CEO") and the Chief Financial Officer ("CFO") that, among other things, report on the design of disclosure controls and procedures and the design of internal controls over financial reporting.

Disclosure controls and procedures have been designed to provide reasonable assurance that all relevant information required to be disclosed by the Company is accumulated and communicated to senior management as appropriate and recorded, processed, summarized, and reported to allow timely decisions with respect to required disclosure, including in its annual filings, interim filings or other reports filed or submitted by it under securities legislation.

Management, including the CEO and CFO, is responsible for establishing and maintaining adequate internal control over financial reporting. Management believes that any system of internal control over financial reporting, no matter how well conceived and operated, has inherent limitations. As a result, even those systems designed to be effective can provide only reasonable, not absolute, assurance that the objectives of the control system are met. There have been no changes in Elevation's internal control over financial reporting during the three months ended March 31, 2023, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

CAUTIONARY NOTE REGARDING FORWARD-LOOKING INFORMATION

This MD&A contains statements that constitute "forward-looking statements" within the meaning of National Instrument 51-102, Continuous Disclosure Obligations of the Canadian Securities Administrators. Forward-looking statements often, but not always, are identified by the use of words such as "seek", "anticipate", "believe", "plan", "estimate", "expect", "targeting" and "intend" and statements that an event or result "may", "will", "should", "could", or "might" occur or be achieved and other similar expressions. Forward-looking statements in this MD&A include but are not limited to statements regarding the Company's future exploration and development plans and expenditures, the satisfaction of rights and performance of obligations under agreements to which the Company is a party, the ability of the Company to hire and retain employees and consultants and estimated administrative and other expenditures. The forward-looking statements that are contained in this MD&A involve a number of risks and uncertainties. As a consequence, actual results might differ materially from results forecast or suggested in these forward-looking statements. Some of these risks and uncertainties are identified under the heading *Risks and Uncertainties* in this MD&A. Additional information regarding these factors and other important factors that could cause results to differ materially may be referred to as part of forward-looking statements. The forward-looking statements are qualified in their entirety by reference to the important factors discussed under the heading *Risks and Uncertainties* and to those that may be discussed as part of forward-looking statements. Forward-looking statements involve known and unknown risks, uncertainties, assumptions and other factors that may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Factors that could cause the actual results to differ include market prices, exploration success, continued availability of capital and financing, inability to obtain required regulatory approvals and general market conditions. These statements are based on a number of assumptions, including assumptions regarding general market conditions, the timing and receipt of regulatory approvals, the ability

of the Company and other relevant parties to satisfy regulatory requirements, the availability of financing for proposed transactions and programs on reasonable terms and the ability of third-party service providers to deliver services in a timely manner. Forward-looking statements contained herein are made as of the date of this MD&A and the Company disclaims any obligation to update any forward-looking statements, whether as a result of new information, future events or results or otherwise, except as may be required by law. If the Company does update one or more forward-looking statements, no inference should be drawn that it will make additional updates with respect to those or other forward-looking statements. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements.

TECHNICAL INFORMATION

Unless otherwise indicated, all technical data contained in this MD&A that relates to geology, exploration and mineral resources has been reviewed and approved by Ron Kieckbusch, CPG., Consultant to Elevation Gold. Mr. Kieckbusch is a Qualified Person as defined by National Instrument 43-101 and is responsible for the Moss and Hercules Exploration Projects.

Unless otherwise indicated, the technical disclosure contained within this MD&A that relates to the Company's operating mine has been reviewed and approved by Tim J. Swendseid, P.E., MBA, CFA, Chief Executive Officer of the Company and a Qualified Person for the purpose of National Instrument 43-101.
